1 Title, Team, and Affiliations

Project title: *Heard but Not Studied: Mapping the Gap Between Health Research and Women's Lived Experiences*

Name	Role	Willamette email
Shanti Brodnick	Owner Product Lead	sebrodnick@willamette.edu

Peer Stakeholder POs: *(from lookup)*

Repository: <https://github.com/Addie-Shanti-Org/GenderDisparityinResearch>

2 Abstract

(150 to 250 words after you have results. Summarize: problem, approach, key finding, impact, limitation. Write this section last.)

3 Introduction: Problem and Research Questions

Problem statement:

Primary research question:

Secondary questions (if any):

Changes since M1 proposal: *(none yet, or explain pivot)*

4 Impact and Stakeholders

The primary stakeholder for this project is women. Stakeholders who will make that happen are medical researchers, clinical trial designers, and public health policymakers who decide where to allocate research funding and direct study enrollment. If this project succeeds, it will produce a data-driven, ranked map of women's health conditions that are widely discussed in patient communities but underrepresented in clinical literature, giving decision-makers a concrete, evidence-based starting point for prioritizing understudied conditions. Secondary stakeholders include patient advocacy organizations (such as endometriosis or PCOS foundations) who can use gap findings to strengthen funding arguments, and then women patients themselves, who

stand to benefit downstream if research priorities shift toward conditions they disproportionately experience.

5 Related Work and Background

Wildfire smoke and respiratory health are well studied at regional scale (Reid et al. 2016; Liu et al. 2016). This project applies county-level public data to Oregon specifically.

6 Data and Data Engineering

Sources:

Source	Role	Access
--------	------	--------

Engineering summary: Raw data in `data/raw/`; processed panel in `data/processed/`; ingest scripts in `src/ingest/`.

```
# Replace with your project data when ready:
# panel <- readRDS(here::here("data/processed/analysis_panel.rds"))
# nrow(panel)
knitr::kable(data.frame(
  check = c("Rows", "Counties", "Date range"),
  status = c("stub", "stub", "stub")
))
```

Table 1: Example QC summary (replace with your panel)

check	status
Rows	stub
Counties	stub
Date range	stub

7 Ethics and Responsible Use

- Privacy:
- Fairness / equity:
- Limitations of setting:
- Non-causal framing: (*if observational*)

8 Methods and Evaluation

Design:

Primary analysis:

Evaluation metrics:

Train / validation / holdout:

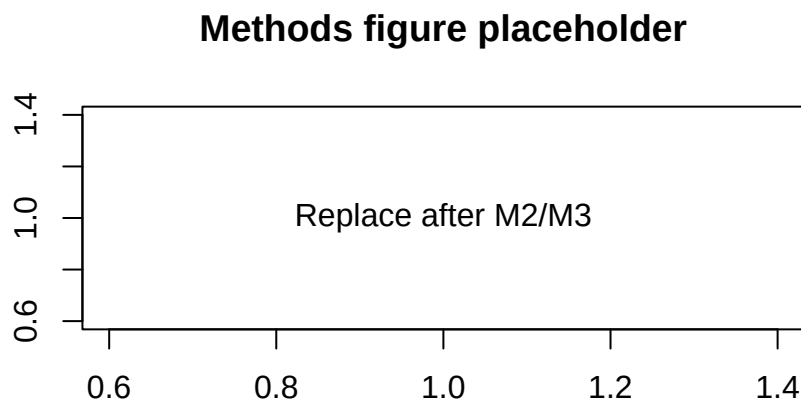

Figure 1: Replace with a methods diagram or exploratory plot

9 Results and Visualizations

(Stub: key findings with [Figure 1](#) and tables.)

10 Discussion, Limitations, and Future Work

Interpretation:

Limitations: *(tie to actual data and design)*

Future work:

11 Conclusions and Recommendations

(Short, stakeholder-facing takeaways.)

12 Reproducibility and References

Reproduce main results:

```
cd your-repo
quarto render deliverables/M4-writeup-draft/writeup.qmd
```

Dependencies: `requirements.txt` or `renv.lock` in repo root.

Data: URLs and approval status documented in `docs/data-dictionary.md`.
